

SERVOX® INTON

New edition of the old classic!

With over 100,000 users, the SERVVOX® INTON is the most widely used speech aid amongst laryngectomees. Its cutting-edge and user-friendly design has been copied many times. Two years ago the SERVVOX® *digital* successfully emerged as the result of a huge technical development, inkeeping with the SERVVOX philosophy.

For all users who, next to the proved, long-lasting SERVVOX quality of a traditional volume and frequency setting, have no need for the further possibilities of the SERVVOX® *digital*, we have re-introduced the SERVVOX® INTON.

As a result, we can guarantee that all individual demands of a speech aid can be met by a product from the SERVVOX range.

We deliver the SERVVOX® INTON together with a processor controlled charger and two batteries. Charging the speech aid couldn't be easier; simply place the entire device into the charging port. It is not possible to overcharge the batteries.

- **Traditional volume adjustment by simply rotating wheel**
- **Reliable 2-Button-System for basic pitch and accentuation**
- **Recognisable and functional design**
- **High quality materials and best workmanship**

Over 100,000 satisfied users worldwide!
