

## COMPANY NEWS RELEASE:

# Amplitude<sup>®</sup> D Screening Audiometer Announced

**August 21, 2013 – King of Prussia, PA** – Otovation, a recognized leader in portable and advanced products for hearing care diagnostics announces the release of the Amplitude D screening audiometer. Handheld and self-contained, the Amplitude D model can be used in either office or patient settings.

Amplitude D offers best in class features for manual screening audiometry – a built-in color screen with an icon-based interface, internal storage of up to 1000 audiograms, and simple download and printing with the included Amplitude D database software. The audiometer has a built-in rechargeable battery and can be used in a completely portable mode, storing tests that can later be conveniently downloaded and printed using the supplied USB charging and data transfer cable.

The Amplitude D is ideal for school screening, primary care office use, and a variety of additional settings where portability and simplicity matter. Plus, you can use a variety of headphones with the model D, including TDH-39, EAR 5A inserts, and Sennheiser circumaurals. Specifications include full range testing from 125 to 8 kHz, and up to 90 dB HL. Prices start at just **\$895** for the complete system, including the handheld unit, USB power/data cable, TDH

headphones, software CD and printed User Guide.

Best in class features for a screening audiometer

At just 5.5 by 2 inches the Amplitude D is as portable as your smart phone!

Otovation will begin shipping the Amplitude D in September, 2013. More information on the Amplitude D model will be posted soon on our website at [www.otovation.com](http://www.otovation.com).
